PROFESSIONAL INTERESTS

Research Interests: My current research focuses on using advanced MR imaging techniques to study the brain as a complex network. I am a founding member of the Laboratory for Complex Brain Networks (LCBN), and in the

LCBN, we use diffusion tensor imaging, perfusion imaging, voxel-based morphometry, and functional MRI (fMRI) to study brain networks using network theory approaches. Such approaches analyze the entire brain and view brain processing as a complex system. I am applying these techniques to learn how exercise, nutritional habits, beet root juice, and meditation affect the functioning brain in the elderly.
